Summary

Project manager and engineer running the IT portfolio of a Riyadh IP-services firm: five production systems, including an IP-management platform with **52 live services** that I built end to end on a commercial admin base. For the trademark-monitoring platform I wrote the requirements, ran a **four-vendor evaluation**, made the build-vs-buy call and led the in-house build, now in production. Hands-on in Django, Vue and PostgreSQL; in industry since 2022.

Experience

Saudi Intellectual Property Rights Company (SIPRC)

Jul 2025 – Present

IP-services firm — Riyadh, KSA

Project Manager, IT Projects

Mar 2026 – Present

- **Own the IT portfolio: five production systems** — IP management (**52 live services**), trademark monitoring, automation, custom reporting, company site with an AI agent — requirements and procurement through release and maintenance.
- Wrote the requirements for the trademark-monitoring platform, ran a **four-vendor evaluation** against them, made the **build-vs-buy call**, and led the in-house build; now in production.
- Set the rule that **model output driving a legal recommendation is validated against historical outcomes** before anyone relies on it.
- **Rejected a completed Power BI build** that missed business needs and re-scoped it as a custom module; led a **cloud migration with zero downtime**.

Senior Frontend Engineer → Full-Stack Engineer

Jul 2025 – Mar 2026

- **Built the IP-management platform end to end** on a commercial admin base — data model, modules, role-scoped access, backend integration, bilingual Arabic/English RTL (Nuxt 3 + TypeScript, Django + PostgreSQL) — now the operations team's daily system of record.
- **Owned the cepro.ai rebuild** on Next.js 15 + React 19 — 17 pages, in-browser Arabic OCR — delivered **two weeks early**; built the Cepro brand-protection dashboard from zero. cepro.ai
- **Founded the QA practice**: 530+ Selenium test cases across 170+ features, manual regression down **40%**; 59-page developer docs that **halved onboarding**.

Frontend Engineer

2024 – 2025

Digitree (Nexxora Holding) — AI-powered fashion technology, remote

- **Sole frontend engineer**: six production apps zero to launch — Mintora print-on-demand, AR virtual try-on (TensorFlow.js + MediaPipe Pose), Three.js 3D showroom, five-country e-commerce (PayPal + Kashier, five languages), B2B dashboard with AI image generation, extended to 16 locales with full RTL.

Frontend Engineer

2023 – 2024

IDAAM — Brain Health Technology, USA, remote

- Built front-end modules for **Keme**, a US clinic-management platform (Vue 3): patients, appointments, telehealth, billing — against a Laravel REST API.

Frontend Developer (Freelance)

2022 – 2023

Independent — remote

- **Qada** — Arabic engineering-projects platform, fully RTL: **117 Vue components** across four role-scoped modules (admin, business, engineering offices, members) with route guards and per-module service layers against a Laravel API.
- Four further client projects, requirements to deployment: **Climate Risk Assessment Tool** (PhD research, Leaflet maps), **Lusion 3D** (Three.js WebGL), fitness e-commerce (Django REST), User Management Dashboard (TypeScript, Cypress E2E, EN/AR RTL).

Skills

Delivery: IT portfolio management, requirements, vendor evaluation, build-vs-buy, bilingual reporting, risk & release · **Engineering**: Python, Django, PostgreSQL, Vue 3 / Nuxt 3, TypeScript, React / Next.js, Docker, OCI / AWS, Playwright, Selenium; LLM pipelines with evaluation against historical outcomes · **Domain**: IP operations, brand protection, Arabic/English RTL · **Open source**: lifecycle tools [phasegate](#) · [decision-matrix](#) · [django-postmortem](#); RTL toolkits [vue-rtl-kit](#) · [django-rtl-admin](#)

Education & Languages

B.Sc. Computer Science, Assiut University — Egypt, 2019 – 2023

Languages: Arabic (native) · English (professional)
